L10 ANSWER 1 OF 1 EMBASE COPYRIGHT 2005 ELSEVIER INC. ALL RIGHTS RESERVED.

on STN

TI A phase II study of weekly oral methotrexate and ***zidovudine***
(

AZT) in advanced adenocarcinoma of the pancreas and
hepatocellular carcinoma.

AB . . . or hepatocellular carcinoma were treated with weekly oral
methotrexate (7.5 mg/M2 every 6 hours for 6 doses) and continuous
oral

AZT (200 mg four times daily). Patients were treated for
a total
of 6 months or until disease progression. The median age was 66
(range

44-79) and the median KPS was 80. No ***patient*** had
received prior
chemotherapy. Hematologic toxicity was severe with 50% of patients
developing hemoglobins less than 8 gm/dl and 70% with granulocyte
counts

less than 1000 per mm3. One ***patient*** achieved a
radiographic

complete remission and 2 had stable disease. Two-thirds of
patients

progressed within 2 months of beginning therapy. The combination
of

methotrexate and ***AZT*** is an inactive regimen in pancreatic
and

hepatocellular carcinoma and is associated with considerable
toxicity.
